Literature review

Paper	Why
Axelrod (ed.), *Structure of Decision: The Cognitive Maps of Political Elites* (1976)	Hand-codes decision-makers' causal assertions from documents into signed directed graphs
Kosko, "Fuzzy Cognitive Maps", *Int. J. Man-Machine Studies* (1986)	Weighted causal maps as dynamical systems: concepts carry activation levels, edges carry signed weights
Chesñevar et al., "Towards an Argument Interchange Format" (2006)	Interchange format for argument graphs; distinguishes information nodes from scheme (reasoning-step) nodes
Markóczy & Goldberg, "A Method for Eliciting and Comparing Causal Maps", *J. Management* (1995)	Replicable elicitation technique for objective comparison of beliefs, plus a whole-map comparison measure
Özesmi & Özesmi, "Ecological Models Based on People's Knowledge: A Multi-Step Fuzzy Cognitive Mapping Approach", *Ecological Modelling* (2004)	Protocol for building and merging maps from many people; graph-theory indices; reports maps averaging 23±2 variables, 37±3 connections
Laukkanen, "Comparative Cause Mapping of Organizational Cognitions", *Organization Science* (1994)	What causal maps represent, and what to control when processing raw data for comparability across actors
Poveda-Villalón, Fernández-Izquierdo, Fernández-López & García-Castro, "LOT: An Industrial Oriented Ontology Engineering Framework", *Engineering Applications of AI* 111 (2022)	Lightweight ontology methodology built around reusing terms from published vocabularies, organised in sprints to match agile software practice
Li, Garijo & Poveda-Villalón, "Large Language Models for Ontology Engineering: A Systematic Literature Review" (2026)	Reviews 36 papers / 49 task-level studies on LLMs across ontology requirements, implementation, publication and maintenance; reports a lack of homogenisation in task definitions, datasets and evaluation
Babaei Giglou, D'Souza & Auer, "LLMs4OL: Large Language Models for Ontology Learning", ISWC (2023)	Evaluates nine LLM families on term typing, taxonomy discovery and non-taxonomic relation extraction; finds foundational LLMs insufficient where construction needs reasoning and domain expertise
Nasir et al., "OntoKG-EQ: A Provenance-Grounded, Competency-Question-	Bounded core ontology governed by five fixed analyst competency questions, with every

Paper	Why
Governed Knowledge Graph for Auditable Analyst Querying" (2026)	finding traced back to its observations, evidence and sources; applied to equity markets
Hernández, Hogan & Krötzsch, "Reifying RDF: What Works Well With Wikidata?", SSWS (2015)	Compares four reification options — standard reification, n-ary relations, singleton properties, named graphs — with SPARQL benchmarks
Groth, Gibson & Velterop, "The Anatomy of a Nanopublication", *Information Services & Use* (2010)	Model for publishing a single assertion together with its provenance and publication info
Heddaya et al., "Causal Micro-Narratives", ACL WNU (2024)	Sentence-level classification of inflation causes and effects against an expert-built ontology of 8 causes and 11 effects; annotated corpus and fine-tuned baseline
Ash, Gauthier & Widmer, "Relatio: Text Semantics Capture Political and Economic Narratives", *Political Analysis* (2024)	Unsupervised extraction of narrative structures; clusters phrase variants into entity labels
Rasmussen et al., "Zep: A Temporal Knowledge Graph Architecture for Agent Memory" (2025)	Temporal knowledge graph with bi-temporal edges and episodic, entity and community tiers
